

/ Global Investment Performance Standards (GIPS®)

<p>Performance Reporting according to GIPS®</p> <p>GIPS® are standards issued by the CFA Institute for modern day performance reports. The purpose of these standards is to provide clients with an objective measure for comparing investment results and to promote transparency among fund providers. Futuregrowth Asset Management (Pty) Ltd undertakes to comply with these standards at all times.</p> <p>GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.</p>	<p>Calculation of performance</p> <p>Performance is calculated using the Time Weighted performance methodology. The Time Weighted methodology revalues the portfolio prior to any cash inflow or cash outflow on a daily basis. This minimises the effect of cash flows.</p> <p>Note: The Modified Dietz methodology, which is an approximation of a time weighted rate of return on the portfolio during the period, was previously utilised.</p>
<p>Compliance statement</p> <p>Futuregrowth Asset Management (Pty) Ltd claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Futuregrowth Asset Management has been independently verified for the period 1 January 2000 to 31 December 2019. The verification reports are available upon request.</p> <p>A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.</p>	<p>Calculation of dispersion</p> <p>Three year annualized ex-post standard deviations are calculated using gross returns and are not presented where 36 monthly composite or benchmark returns are not available.</p> <p>Where there are 3 or more portfolios in a composite for the full year, internal dispersion is calculated using an equal-weighted standard deviation of gross returns of all portfolios that were included in that composite for the full year. This was previously only calculated for composites with more than 5 portfolios. As a result of system changes effective January 2016, internal dispersion is now calculated assuming the full population instead of a sample population. This new methodology has been applied historically and the differences are insignificant, ranging from 0.00% to 0.05%.</p>
<p>Definition of the Firm</p> <p>Futuregrowth Asset Management (Pty) Limited ("Futuregrowth"), a subsidiary of Old Mutual Investment Group Holdings (Pty) Limited, is a specialist investment company which manages the full range of interest bearing and developmental investments in an ethical and sustainable way. The firm is defined as all portfolios managed by Futuregrowth.</p>	<p>Definition of a significant cash flow</p> <p>An external cash inflow or outflow, (capital additions or withdrawals), that is greater than the defined Investment Strategy percentage in the composite definition document, of the total opening market value of the portfolio is regarded as a significant cash flow. When a significant cash flow occurs the portfolio may be removed from its composite for a grace period of a maximum of 2 months. Additional information regarding the treatment of significant cash flows is available on request.</p>
<p>Minimum asset levels</p> <p>No minimum levels are required to enter a composite.</p>	<p>Significant event</p> <p>Effective August 2008, Old Mutual Investment Group South Africa acquired a majority stake in Futuregrowth. Futuregrowth's firm definition, policies and processes regarding the calculation and presentation of performance have not been altered or affected by this arrangement.</p>
<p>Treatment of withholding taxes</p> <p>Where withholding taxes are charged on income or sales, proceeds are accounted for net of withholding taxes until such time as any reclaimable portion is received.</p>	<p>Additional information</p> <p>Futuregrowth's compliant presentations and a list of composite descriptions are available upon request. As well as policies for valuing portfolios, calculating performance, and preparing compliant presentations.</p> <p>Contact details: Private Bag X6, Newlands, 7725, South Africa Tel: +27 21 659 5300 Fax: +27 21 659 5400 Business_Development@futuregrowth.co.za www.futuregrowth.co.za</p>

Futuregrowth Call Money Market Composite

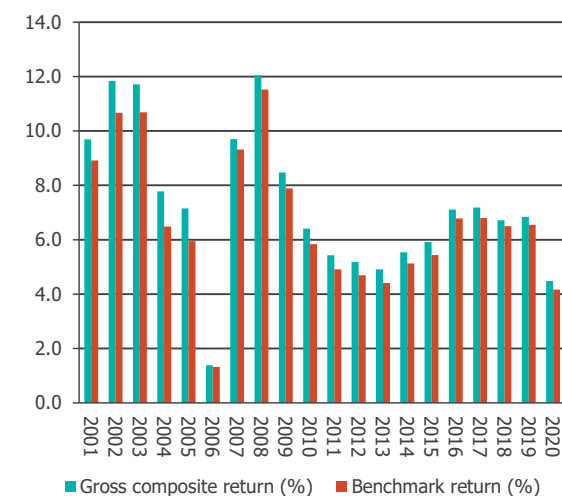

Performance period from January 2001 to December 2020

The Futuregrowth Call Money Market Composite is invested in "cash on call", money placed on an overnight basis at registered financial institutions. The benchmark is the Average Call rate of the 4 largest South African banks.

Notes

Performance year 2004 only contains data from 01-07-2004.

Benchmark changed 01-01-2012 from STeFI 3 Month to South African STeFI composite index. New benchmark aligns more with the investment strategy.

Significant cash flow % changed from N/A as of 01-01-2016.

Significant cash flow % changed from 30% as of 01-01-2012.

Derivative exposure changed 01-01-2012.

As of 01-01-2012 "Futuregrowth 180 day Regulation 28 Money Market Composite" has been renamed to "Futuregrowth 180 day Enhanced Money Market Composite".

This composite was redefined on 01-01-2012. Regulatory changes that took place in the industry during 2012 resulted in portfolios being managed similarly although subject to different regulations. Consequently composites were merged.

As of 01-01-2009 "OMAM Segr Money Market PLUS Composite: STeFI 3 Month NCD" has been renamed to "Futuregrowth 180 day Regulation 28 Money Market Composite". For all history prior to Jan 2009, the policies and procedures of Old Mutual Assurance (Pty) Ltd

Derivative exposure

Market derivatives are allowed, but are used infrequently and in small size to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of longer-term or fixed rate instruments in the fund. Market derivatives are rarely used to add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used very infrequently and only within credit policies and limits.

Futuregrowth 180 day Enhanced Money Market Namibia Composite

Performance period from January 2009 to December 2020

The Futuregrowth 180 day Enhanced Money Market Namibia Composite invests in a minimum of 35% Namibian assets and a maximum 65% South African Money Market and short term debt instruments issued by registered financial and corporate institutions. The individual portfolios maximum instrument term to maturity is 3 years. The weighted average term of the portfolio as a whole may not exceed 180 days. The benchmark is Short Term Fixed Interest 3 Month NCD Index (STeFI 3 Month).

Composite information

Composite creation date	01 October 2011
Inception date	30 September 2011
Annual fee schedule (excl VAT)	0.32%
Defined error materiality	0.03%
Significant cash flow	50%

Notes

Performance year 2011 only contains data from 01-10-2011.
Derivative exposure changed 01-01-2012.
The composite description changed as of 01-05-2013.

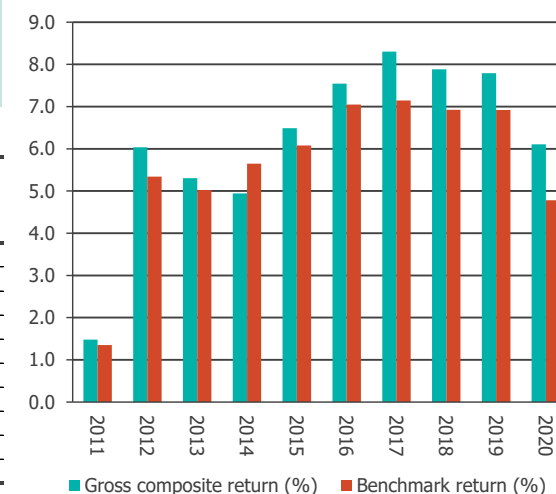

Performance information

in ZAR		
	Composite (%)	Benchmark (%)
Cumulative return	81.99	72.67

Derivative exposure

Market derivatives are allowed, but are used infrequently and in small size to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of longer-term or fixed rate instruments in the fund. Market derivatives are rarely used to add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used very infrequently and only within credit policies and limits.

Annual returns since October 2011

Futuregrowth 365 day Enhanced Money Market Composite

Performance period from January 2009 to December 2020

The Futuregrowth 365 day Enhanced Money Market Composite invests in South African Rand denominated short term debt instruments. The main focus of the portfolio is capital preservation and maximising returns. The individual portfolios maximum instrument days to maturity is variable. The weighted average modified duration of the portfolio as a whole may not exceed 365 days. The benchmark is Short Term Fixed Interest Composite Index (STeFI).

Derivative exposure

Bond futures are used in order to protect the fund against potential capital losses.

Annual returns since November 2013

Futuregrowth Flexible Income Composite

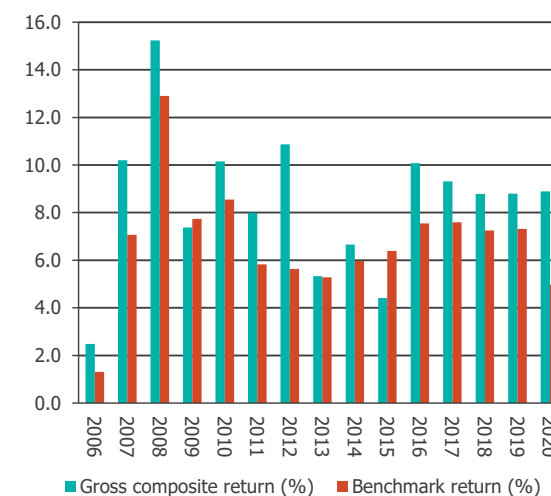

Performance period from July 2006 to December 2020

The Futuregrowth Flexible Income Composite aims to deliver excess return through a combination of interest bearing asset allocation, active yield curve positioning and exposure to higher yielding fixed and variable rate non-government bonds. The Composite is also mandated to invest in inflation linked bonds, listed property and preference shares. Delivering a stable income is balanced with a commitment to utilise market opportunities to seek maximum capital gain, but also to revert strategies to protect capital when market conditions turn negative. The composite is not limited by duration constraints. The mandate allows derivative usage. The benchmark is 110% Short Term Fixed Interest Call Deposit Index (STFCAD).

Inception date	30 June 2006
Annual fee schedule (excl VAT)	0.45%
Defined error materiality	0.07%
Significant cash flow	40%

Notes

Performance year 2006 only contains data from 01-11-2006. Cumulative returns calculated from 01-11-2006. Benchmark changed 01-09-2010 from 1-3 Yrs BEASSA to 110% STeFI Call Deposit (STFCAD). New benchmark aligns more with the Investment strategy. Significant cash flow % changed from 20% as of 01-01-2016. As of 01-01-2009 "OMAM Segr Enhanced Income Composite: 1 - 3 Years BEASSA" has been renamed to "Futuregrowth Segregated Reg 30 Flexible Income Composite". For all history prior to Jan 2009, the policies and procedures of Old Mutual Assurance (Pty) Ltd apply. As of 01-06-2012 "Futuregrowth Segregated Reg 30 Flexible Income Composite" has been renamed to "Futuregrowth Flexible Income Composite". This composite was redefined on 01-01-2012. Regulatory changes that took place in the industry during 2012 resulted in portfolios being managed similarly although subject to different regulations. Consequently composites were merged.

Performance information

in ZAR		
	Composite (%)	Benchmark (%)
Cumulative return	235.24	165.76

Derivative exposure

Market derivatives are allowed, but are used infrequently and in small size to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of longer-term or fixed rate instruments in the fund. Market derivatives are rarely used to add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used very infrequently and only within credit policies and limits.

Futuregrowth Retail Income Composite

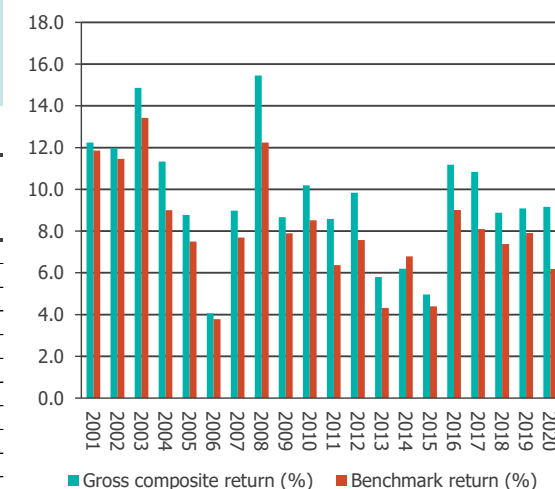

Performance period from January 2001 to December 2020

The Futuregrowth Retail Income Composite seeks excess return and income stability from active decisions regarding interest rate, curve and active asset selection. The mandate allows derivative usage. Complies with the Collective Investment Schemes Control Act regulations. The benchmark is 20% FTSE/JSE All Bond Index (ALBI); 80% Short Term Fixed Interest Composite Index (STeFI).

Notes

Performance year 2006 only contains data from 01-06-2006. Cumulative returns calculated from 01-06-2006. Benchmark changed 01-10-2009. Managed according to 80% STeFI / 20% ALBI, but benchmarked against the peers in its UT category. Significant cash flow % changed from 20% as of 01-01-2016. As of 01-01-2009 "UT Income Fund" has been renamed to "Futuregrowth Retail Income Composite". For all history prior to Jan 2009, the policies and procedures of Old Mutual The composite description changed as of 01-01-2014.

Derivative exposure

Limited exposure to market derivatives are allowed, but are used very rarely or not at all.

Futuregrowth Core Income Composite

Performance period from November 2002 to December 2020

FUTUREGROWTH

/ ASSET MANAGEMENT

The Futuregrowth Core Income Composite aims to deliver excess return through a combination of interest bearing asset allocation, active interest rate risk management, appropriate yield curve positioning and moderate exposure to higher yielding fixed and variable rate non-government bonds. The Composite is also mandated to invest in inflation-linked bonds. It offers a high level of income together with a commitment to higher capital stability. No derivatives allowed. The benchmark is 50% FTSE/JSE All Bond 3 to 7 Years Index (ALBI 3-7 Year); 50% Short Term Fixed Interest Composite Index (STeFI).

Notes

Performance year 2002 only contains data from 01-11-2002.

Benchmark changed 01-01-2013 from 50% BEASSA All Bond Index 1-3 year sector; 50% Short Term Fixed Interest Call Deposit Index to 50% BEASSA All Bond Index 3-7 year sector (ALBI 3-7 year); 50% South African Short Term Fixed Interest Composite Index (STeFI). The benchmark was changed in order to better reflect the 2 year duration of the Significant cash flow % changed from 20% as of 01-01-2016.

As of 01-01-2009 "OMAM Segr IBA Composite: Benchmark = 50% AF Call Deposit Index + 50% 1-3 Year Bond Index" has been renamed to "Futuregrowth Core Income Composite". For all history prior to Jan 2009, the policies and procedures of Old Mutual Assurance (Pty) Ltd apply.

The composite description changed as of 01-01-2014.

Futuregrowth Yield Enhanced Income Composite

Performance period from May 2012 to December 2020

The Futuregrowth Yield Enhanced Income Composite aims to deliver excess return through a combination of interest bearing asset allocation, active interest rate risk management, appropriate yield curve positioning and exposure to higher yielding fixed and variable rate non-government bonds. The Composite is also mandated to invest in inflation linked bonds, unlisted bonds and equities (no more than 3% of the portfolio). The composite is not allowed a modified duration greater than 2.00. Wider derivative limits allows the manager more leverage in protecting the Composite against potential capital loss. The benchmark is 20% FTSE/JSE All Bond Index (ALBI); 80% Short Term Fixed Interest Composite Index (STeFI).

Significant cash flow % changed from 40% as of 01-01-2018.
Performance year 2012 only contains data from 01-05-2012.
Significant cash flow % changed from 30% as of 01-01-2016.
Significant cash flow % changed from 20% as of 01-04-2015.

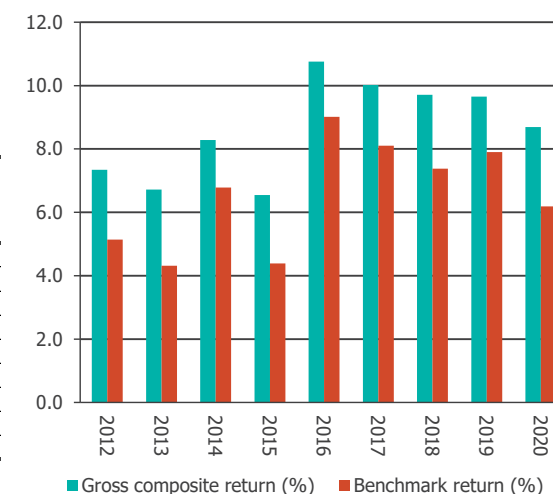

Performance information

in ZAR		
	Composite (%)	Benchmark (%)
Cumulative return	110.59	77.27

Derivative exposure

Market derivatives are used frequently and extensively to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of fixed rate instruments in the fund. Market derivatives are used less frequently to opportunistically add value due to mispricings.

Annual returns since May 2012

Futuregrowth Namibia Retail Income Composite

Performance period from January 2001 to June 2020

FUTUREGROWTH

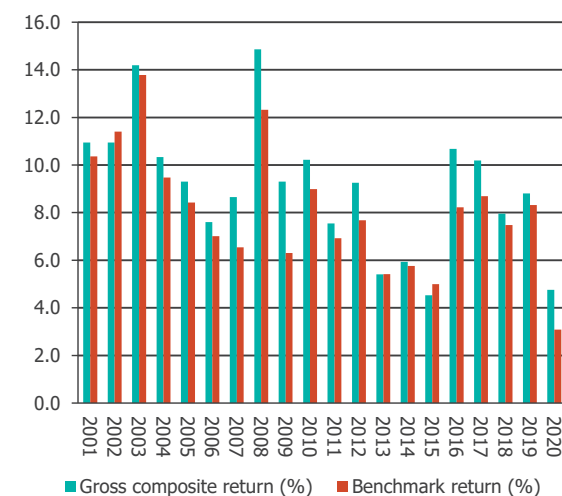

/ ASSET MANAGEMENT

The Futuregrowth Namibia Retail Income Composite seeks excess return and income stability from active decisions regarding interest rate, curve and active asset selection. The mandate allows derivative usage. The fund is mandated to hold a minimum 35% Namibian assets. Complies with the Namibian Collective Investment Schemes Control Act regulations. The benchmark is Category Average Namibian Funds.

Futuregrowth Unit Trust Core Bond Composite

Performance period from January 2001 to December 2020

FUTUREGROWTH

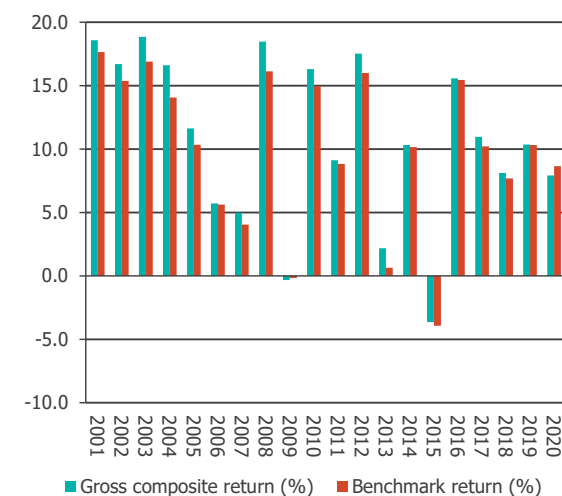

/ ASSET MANAGEMENT

The Futuregrowth Unit Trust Core Bond Composite aims to offer a combination of capital growth and high income yields. The composite invests in public and private sector bonds and deposits, with at least 50% invested in bonds with an effective government guarantee. The composite invests across the full spectrum of the yield curve. Capital growth is primarily obtained by actively taking advantage of interest rate cycles. Complies with the Collective Investment Schemes Control Act Regulations. The benchmark is FTSE/JSE All Bond Index (ALBI).

Notes

Benchmark changed 01-10-2009. Managed according to ALBI, but benchmarked against the average of the peers in its UT category.

Significant cash flow % changed from N/A as of 01-01-2016.

Significant cash flow % changed from 20% as of 01-01-2010.

Futuregrowth Pooled Core Bond Composite

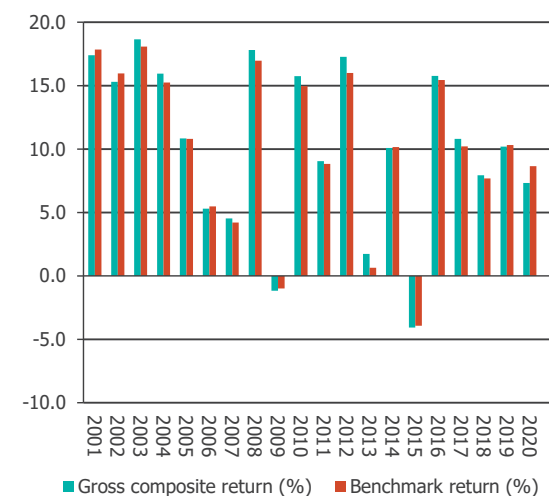

Performance period from January 2001 to December 2020

The Futuregrowth Pooled Core Bond Composite is actively managed through interest rate and yield curve decisions. Seeks excess return from active listed asset selection. Mandate allows utilisation of derivatives. Liquidity constraints because of aggressive asset allocations decisions by the MSI boutique (the biggest investor in the composite). The benchmark is FTSE/JSE All Bond Index (ALBI).

Performance information

in ZAR		
	Composite (%)	Benchmark (%)
Cumulative return	722.09	695.05

Notes

Significant cash flow % changed from N/A as of 01-01-2016.
Significant cash flow % changed from 20% as of 01-01-2010.
As of 01-01-2009 "IF BONDS COMPOSITE" has been renamed to "Futuregrowth Pooled Core Bond Composite". For all history prior to Jan 2009, the policies and procedures of Old Mutual Assurance (Pty) Ltd apply.

Derivative exposure

Market derivatives are allowed, but are used infrequently and in small size to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of longer-term or fixed rate instruments in the fund. Market derivatives are rarely used to add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used very infrequently and only within credit policies and limits.

Futuregrowth Core Bond Composite

Performance period from January 2001 to December 2020

The Futuregrowth Core Bond Composite aims to deliver excess return through a combination of interest bearing asset allocation (listed), active interest rate risk management, appropriate yield curve positioning and very low yield enhancement from listed fixed rate assets. Mandate allows for very low utilisation of listed derivatives. The benchmark is FTSE/JSE All Bond Index (ALBI).

Notes

Significant cash flow % changed from 20% as of 01-01-2016. As of 01-01-2009 "OMAM Segr Fixed Interest Composite: BEASSA" has been renamed to "Futuregrowth Core Bond Composite". For all history prior to Jan 2009, the policies and procedures of Old Mutual Assurance (Pty) Ltd apply.

Derivative exposure

Market derivatives are allowed, but are used infrequently and in small size to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of longer-term or fixed rate instruments in the fund. Market derivatives are rarely used to add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used very infrequently and only within credit policies and limits.

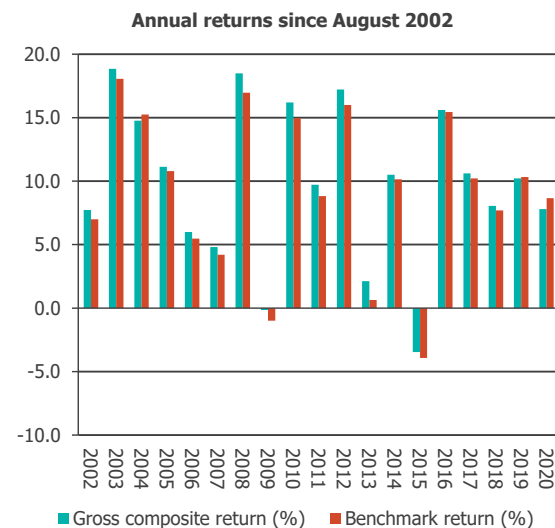

Futuregrowth Active Bond Composite

Performance period from August 2002 to December 2020

The Futuregrowth Active Bond Composite targets the interest rate risk of the ALBI with active decisions regarding interest rate and yield curve risk. Seeks excess return from active asset selection including only listed instruments and low yield enhancement from listed fixed and floating rate assets. Mandate allows for low utilisation of listed and unlisted derivatives. The benchmark is FTSE/JSE All Bond Index (ALBI).

Notes

Performance year 2002 only contains data from 01-08-2002.
Significant cash flow % changed from N/A as of 01-01-2016.

Derivative exposure

Market derivatives are used frequently to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of short-term or floating rate instruments in the fund. Market derivatives are used less frequently to opportunistically add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are not allowed.

Futuregrowth Listed SRI Core Bond Composite

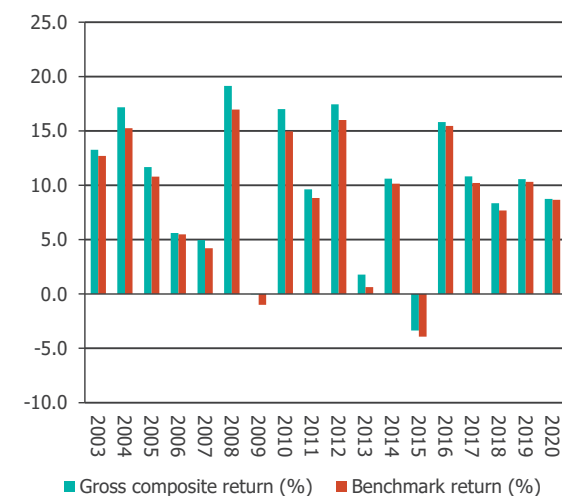

Performance period from April 2003 to December 2020

The Futuregrowth Listed SRI Core Bond Composite targets the interest rate risk of the ALBI with active decisions in terms of interest rate and yield curve risk. Seeks excess return from active asset selection, including only listed assets. Invests in bonds issued by institutions which contribute to the development of South Africa through social impact, commitment to development and community development and support. Complies with the Collective Investment Schemes Control Act Regulations. The benchmark is FTSE/JSE All Bond Index (ALBI).

Defined error materiality	0.08%
Significant cash flow	20%

Performance information

in ZAR		
	Composite (%)	Benchmark (%)
Cumulative return	350.41	304.07

Notes

Performance year 2004 only contains data from 01-08-2004.

As of 01-01-2020 "Futuregrowth Listed Yield Enhanced Composite" has been renamed to "Futuregrowth Listed Yield Enhanced Bond Composite".

Derivative exposure

Market derivatives are used frequently and extensively to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of short-term or floating rate instruments in the fund. Market derivatives are used less frequently to opportunistically add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used very infrequently and only within credit policies and limits.

Futuregrowth Yield Enhanced Regulation 28 Bond Composite

Performance period from September 2012 to December 2020

The Futuregrowth Yield Enhanced Regulation 28 Bond Composite targets the interest rate risk of the ALBI with active decisions regarding interest rate and yield curve risk. Seeks excess return from active asset selection, including listed and unlisted assets. Includes a broad mandate to utilise derivative instruments. The benchmark is FTSE/JSE All Bond Index (ALBI).

Notes

Performance year 2012 only contains data from 01-09-2012.
 Performance year 2013 only contains data from 01-06-2013.
 Cumulative returns calculated from 01-06-2013.
 Significant cash flow % changed from 30% as of 01-01-2016.

Derivative exposure

Market derivatives are used frequently and extensively to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of short-term or floating rate instruments in the fund. Market derivatives are used less frequently to opportunistically add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used infrequently and only within credit policies and limits. Derivative usage is subject to Regulation 28 limits.

Annual returns since September 2012

Futuregrowth Yield Enhanced CISCA Bond Composite

Performance period from October 2017 to December 2020

The Futuregrowth Yield Enhanced CISCA Bond Composite seeks excess returns with moderate risk limits, reasonable yield enhancement, moderate liquidity and relatively low volatility due to constrained interest rate positions. The benchmark is FTSE/JSE All Bond Index (ALBI).

Returns

in ZAR

Performance information

in ZAR		
	Composite (%)	Benchmark (%)
Cumulative return	33.51	31.95

Notes

Performance year 2017 only contains data from 01-10-2017.

Derivative exposure

Market derivatives are used where possible and subject to the limitations of CISCA to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of short-term or floating rate instruments in the fund. Market derivatives are used less frequently to opportunistically add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used infrequently and only within credit policies and limits.

Annual returns since October 2017

Futuregrowth Yield Enhanced Bond Composite

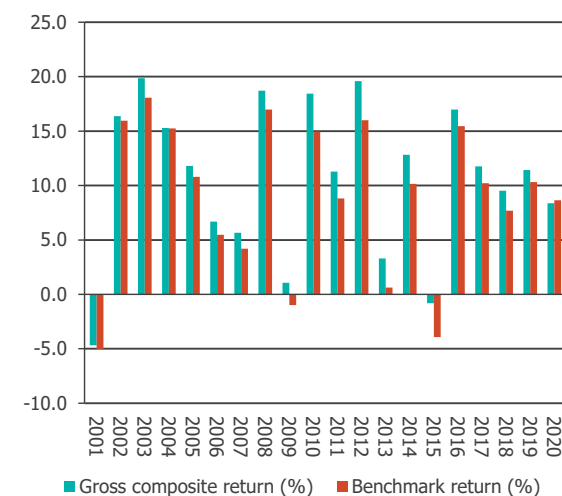

Performance period from December 2001 to December 2020

The Futuregrowth Yield Enhanced Bond Composite targets high returns through a combination of moderate credit concentration limits, active interest rate risk management and active off-benchmark bets. Seeks excess return from active asset selection, including listed and unlisted assets. Includes a broad mandate to utilise derivative instruments. The benchmark is FTSE/JSE All Bond Index (ALBI).

Notes

Performance year 2001 only contains data from 01-12-2001.
Significant cash flow % changed from 30% as of 01-01-2016.

Derivative exposure

Market derivatives are used frequently and extensively to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of short-term or floating rate instruments in the fund. Market derivatives are used less frequently to opportunistically add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used infrequently and only within credit policies and limits.

Futuregrowth Infrastructure & Development Bond Composite

Performance period from January 2001 to December 2020

FUTUREGROWTH

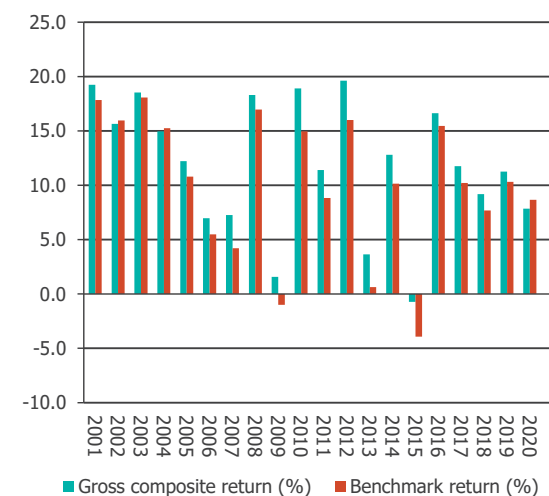

/ ASSET MANAGEMENT

The Futuregrowth Infrastructure & Development Bond Composite targets the interest rate risk of the ALBI with active decisions regarding interest rate and yield curve risk. Seeks excess return from active assets selection, including listed and unlisted assets. Invests in assets that contribute to infrastructure development in South Africa and provide yield enhancement. May invest up to 5% of the Fund in non-bond assets (e.g. equities). Includes a broad mandate to utilise derivative instruments. The benchmark is FTSE/JSE All Bond Index (ALBI).

Performance information

in ZAR		
	Composite (%)	Benchmark (%)
Cumulative return	1,009.11	695.05

Derivative exposure

Market derivatives are used frequently and extensively to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of short-term or floating rate instruments in the fund. Market derivatives are used less frequently to opportunistically add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used infrequently and only within credit policies and limits.

Futuregrowth Active Government Bond Composite

Performance period from August 2020 to December 2020

The Futuregrowth Active Government Bond Composite targets the interest rate risk of the GOVI with active decisions regarding interest rates and the shape of the yield curve. Seeks excess return from active asset selection including only South African Government Bonds and a maximum of 10% money market assets with wide interest rate risk limits. Mandate allows for moderate utilisation of market derivatives. The benchmark is the FTSE/JSE All Bond Government Index (GOVI).

Returns

Performance information

	in ZAR	
	Composite (%)	Benchmark (%)
Cumulative return	7.73	7.65

Notes

Performance year 2020 only contains data from 01-08-2020.

Derivative exposure

Market derivatives are allowed, but are used infrequently and in small size to manage interest rate risk of the fund relative to the benchmark. Market derivatives are rarely used to add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield.

Annual returns since August 2020

Futuregrowth Long Duration Bond Composite

Performance period from December 2006 to July 2018

The Futuregrowth Long Duration Bond Composite aims to deliver excess return through active interest rate risk management within the ALBI 12+ sector, individual stock selection and a low exposure to higher yielding non-government bonds. Seeks excess return from allocation to listed non-government bonds, listed property and preference shares. Includes a mandate to utilise derivative instruments. The benchmark is FTSE/JSE All Bond 12+ Years Index (ALBI 12+ Year).

Derivative exposure changed 01-01-2012.

Derivative exposure

Market derivatives are allowed, but are used infrequently and in small size to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of longer-term or fixed rate instruments in the fund. Market derivatives are rarely used to add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used very infrequently and only within credit policies and limits.

Futuregrowth Passive Long Duration ILB Composite

Performance period from January 2018 to December 2020

FUTUREGROWTH

/ ASSET MANAGEMENT

The Futuregrowth Passive Long Duration ILB Composite tracks long real duration performance and modified duration. The benchmark is RSA I2046; RSA I2050 inflation-linked bonds weighted by proportionate market capitalisation.

Credit derivatives are allowed, but used very infrequently and only within credit policies and limits.

Annual returns since January 2018

Futuregrowth Core ILB Composite

Performance period from November 2005 to December 2020

The Futuregrowth Core ILB Composite aims to deliver excess return through active interest rate risk management, appropriate yield curve positioning and exposure to higher yielding non-government inflation linked bonds. Mandate allows utilisation of derivatives. The benchmark is FTSE/JSE Inflation-Linked Government Index (IGOV).

Derivative exposure

Market derivatives are allowed, but are used infrequently and in small size to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of longer-term or fixed rate instruments in the fund. Market derivatives are rarely used to add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used very infrequently and only within credit policies and limits.

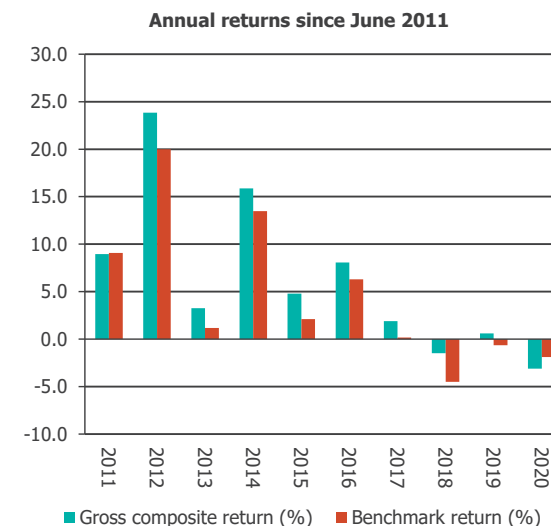

Futuregrowth Yield Enhanced Long Duration ILB Composite

Performance period from June 2011 to December 2020

The Futuregrowth Yield Enhanced Long Duration ILB Composite targets long term real returns with active decisions regarding real and nominal interest rate and yield curve risk. Seeks excess return from active asset selection and yield enhancement from listed and unlisted assets. Includes a broad mandate to utilise derivative instruments. The benchmark is FTSE/JSE Inflation-Linked 12+ Years Index (CILI 12+ Year).

Notes

Performance year 2011 only contains data from 01-06-2011.

Benchmark changed 01-10-2018 from Barclays South African Government Inflation Linked Bond 15+ year Index (BILBI 15+ year) to align the valuation methodology of the benchmark to that of the composite.

Benchmark changed 01-02-2017 from RSA R202 Bond (A constituent of the Barclays South African Government Inflation Linked Bond Index) to align with the investment strategy of the composite.

Significant cash flow % changed from 30% as of 01-01-2016.

Derivative exposure changed 01-01-2012.

As of 01-02-2017 "Futuregrowth Yield Enhanced R202 ILB Composite" has been renamed to "Futuregrowth Yield Enhanced Long Duration ILB Composite".

Composite description updated 01-01-2020 to more accurately reflect the management of the composite.

Derivative exposure

Market derivatives are used frequently and extensively to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of short-term or floating rate instruments in the fund. Market derivatives are used less frequently to opportunistically add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used infrequently and only within credit policies and limits.

Futuregrowth Power ILB Composite

Performance period from May 2015 to December 2020

The Futuregrowth Power ILB Composite seeks long term real returns and tangible social and developmental impact from investing in energy related businesses and sectors in Southern Africa including electricity generation from renewable, alternative and traditional sources, power distribution and reticulation, and supporting industries and sectors. It allows for a small exposure to Southern African Developmental Community (SADC) investments. Derivatives are allowed. The benchmark is the RSA I2038 Bond (A constituent of the Barclays South African Government Inflation Linked Bond Index).

Futuregrowth Infrastructure & Development ILB Composite

Performance period from November 2016 to December 2020

FUTUREGROWTH

/ ASSET MANAGEMENT

The Futuregrowth Infrastructure & Development ILB Composite targets long term real returns with active decisions regarding interest rate and yield curve risk. Seeks excess return from active assets selection, including listed and unlisted assets. Invests in assets that contribute to infrastructure development in South Africa and provide yield enhancement. May invest up to 5% of the fund in non-bond assets (e.g. equities). Includes a broad mandate to utilise derivative instruments. The benchmark is FTSE/JSE Inflation-Linked 12+ Years Index (CILI 12+ Year).

Futuregrowth Yield Enhanced A STeFI+ Short Term Composite

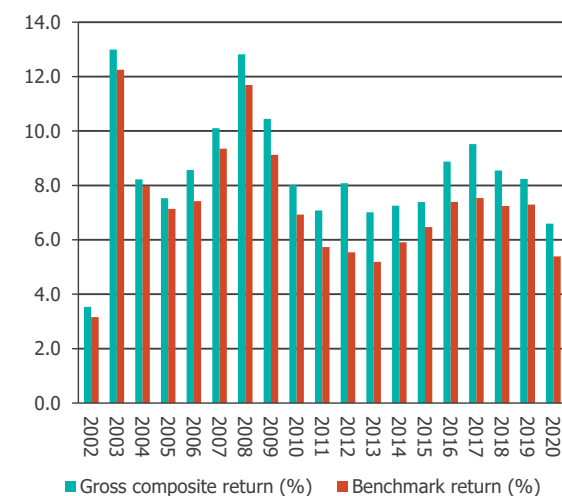

Performance period from October 2002 to December 2020

The Futuregrowth Yield Enhanced A STeFI+ Short Term Composite targets high cash returns through active interest rate risk management, active yield curve bets, moderate credit concentrations in lower rated entities, credit arbitrage, moderate market and credit derivative usage. The composite's weighted average rated credit quality must be a minimum of A-. The benchmark is Short Term Fixed Interest Composite Index (STeFI).

Returns

Inception date	30 September 2002
Annual fee schedule (excl VAT)	0.30%
Defined error materiality	0.03%
Significant cash flow	50%

Notes

Performance year 2002 only contains data from 01-10-2002.
Significant cash flow % changed from 20% as of 01-01-2010.
Derivative exposure changed 01-01-2012.

Performance information

in ZAR		
	Composite (%)	Benchmark (%)
Cumulative return	366.59	280.18

Derivative exposure

Market derivatives are used frequently and extensively to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of short-term or floating rate instruments in the fund. Market derivatives are used less frequently to opportunistically add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used infrequently and only within credit policies and limits.

Futuregrowth Yield Enhanced A STeFI+ Composite (CISCA)

Performance period from May 2014 to December 2020

The Futuregrowth Yield Enhanced A STeFI+ Composite (CISCA) seeks excess yields from less liquid or longer term instruments and accordingly should maintain a stable capital holding. Complies with the Collective Investment Schemes Control Act Regulations. The benchmark is Short Term Fixed Interest Composite Index (STeFI).

Composite creation date	23 March 2015
Inception date	30 April 2014
Annual fee schedule (excl VAT)	0.45%
Defined error materiality	0.05%
Significant cash flow	20%

Notes

Performance year 2014 only contains data from 01-05-2014
Significant cash flow % changed from 30% as of 01-01-2016.
As of 01-10-2015 "Futuregrowth Yield Enhanced AA/A STeFI+ Composite (CISCA)" has been renamed to "Futuregrowth Yield Enhanced A STeFI+ Composite (CISCA)".

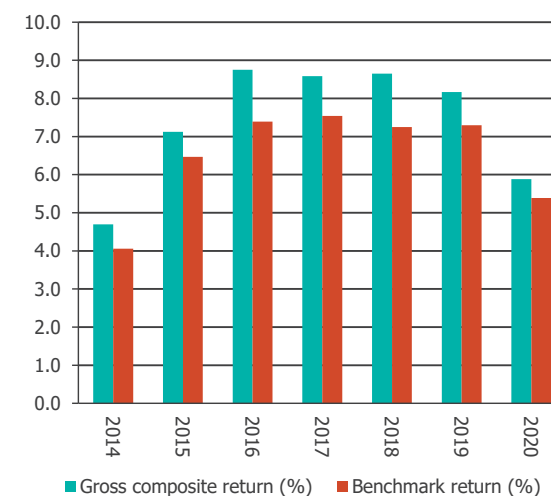

Performance information

in ZAR		
	Composite (%)	Benchmark (%)
Cumulative return	64.80	55.16

Derivative exposure

Market derivatives are used where possible and subject to the limitations of CISCA to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of term fixed rate instruments in the fund. Market derivatives are used less frequently to opportunistically add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used infrequently and only within credit policies and limits.

Annual returns since May 2014

Futuregrowth Yield Enhanced A STeFI+ Composite

Performance period from January 2010 to December 2020

The Futuregrowth Yield Enhanced A STeFI+ Composite targets high cash returns through active interest rate risk management, active yield curve bets, moderate credit concentrations in lower rated entities, credit arbitrage, moderate market and credit derivative usage. The composite's weighted average rated credit quality must be a minimum of A+ (AA/AA- if converted to official ratings). The benchmark is Short Term Fixed Interest Composite Index (STeFI).

Notes

Significant cash flow % changed from 20% as of 01-01-2012.
Significant cash flow % changed from 30% as of 01-01-2016.
Performance year 2020 only contains data to 31-01-2020.

Derivative exposure

Market derivatives are used frequently and extensively, and may include substantial fund gearing, to manage interest rate risk of the fund relative to the benchmark, to enable the acquisition of long-term or fixed rate instruments, to take market timing positions, and to have exposure to different asset classes. Market derivatives are used frequently to opportunistically add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, and may be used frequently and extensively within credit policies and limits.

Futuregrowth Yield Enhanced A STeFI+ Composite (3 years)

Performance period from May 2014 to February 2017

The Futuregrowth Yield Enhanced A STeFI+ Composite (3 years) seeks moderate yield enhancement by selecting less liquid and medium to long term instruments and accordingly should maintain a stable capital holding. The benchmark is Short Term Fixed Interest Composite Index (STeFI).

Returns

in ZAR									
Period	Gross composite return (%)	Composite 3yr ex-post std. deviation (%)	Benchmark return (%)	Benchmark 3yr ex-post std. deviation (%)	No. of accounts	Internal dispersion (%)	Market value at end of period (Rm)	AuM at end of period (Rm)	% Firm assets

As of 01-10-2015 "Futuregrowth Yield Enhanced AA/A STeFI+ Composite (3 years)" has been renamed to "Futuregrowth Yield Enhanced A STeFI+ Composite (3 years)".

Derivative exposure

Market derivatives are used frequently and extensively to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of term fixed rate instruments in the fund. Market derivatives are used less frequently to opportunistically add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used infrequently and only within credit policies and limits.

Annual returns since May 2014

Futuregrowth Interest Rate Asset Allocation Composite

Performance period from July 2010 to December 2020

The Futuregrowth Interest Rate Asset Allocation Composite aims to deliver excess return mainly through a combination of aggressive interest bearing asset allocation, overall active interest rate risk management and appropriate yield curve positioning within the various interest bearing asset classes. Exposure to higher yielding non-government bonds is limited in order to enhance the ability of the composite to allocate to the most appropriate interest bearing asset class at short notice. The benchmark is 62.5% FTSE/JSE All Bond Index (ALBI); 30% FTSE/JSE Inflation-Linked Government Index (IGOV); 7.5% Short Term Call Deposit Index (STFCAD).

Defined error materiality	0.07%
Significant cash flow	40%

Notes

Performance year 2010 only contains data from 01-07-2010.
Significant cash flow % changed from 30% as of 01-01-2014.
Significant cash flow % changed from 60% as of 01-01-2016.

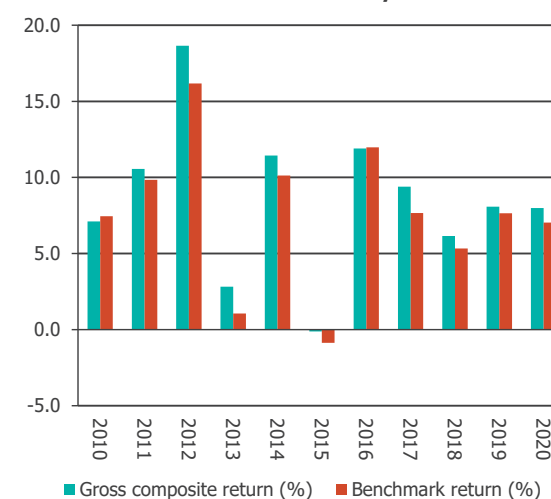

Performance information

in ZAR		
	Composite (%)	Benchmark (%)
Cumulative return	143.82	121.28

Derivative exposure

Market derivatives are allowed, but are used infrequently and in small size to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of longer-term or fixed rate instruments in the fund. Market derivatives are rarely used to add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield. Credit derivatives are allowed, but used very infrequently and only within credit policies and limits.

Annual returns since July 2010

Futuregrowth Long-Dated Fixed and Inflation-Linked Bond Composite

Performance period from September 2012 to December 2020

FUTUREGROWTH

/ ASSET MANAGEMENT

The Futuregrowth Long-Dated Fixed and Inflation-Linked Bond Composite invests in multiple interest rate asset classes. It is actively managed by switching between long dated fixed rate bonds and inflation linked bonds. The benchmark is 46% FTSE/JSE All Bond 12+ Year Index (ALBI 12+ Year); 54% FTSE/JSE Inflation-Linked Government Index (IGOV).

Defined error materiality	0.03%
Significant cash flow	50%

Performance information

in ZAR		
	Composite (%)	Benchmark (%)
Cumulative return	66.39	61.18

Notes

Performance year 2012 only contains data from 01-09-2012.

Benchmark changed 01-05-2019 from 65% BEASSA All Bond Index 12+ year sector (ALBI 12+ year); 35% JSE ASSA Inflation linked Government Bond Index (IGOV) to align with the investment strategy of the composite.

Significant cash flow % changed from 30% as of 01-01-2016.

Derivative exposure

Market derivatives are allowed, but used infrequently and in small size to manage interest rate risk of the fund relative to the benchmark and to enable the acquisition of longer term or fixed rate instruments in the fund. Derivatives instruments may not be used for speculative purposes, but only for hedging, building a position, rebalancing, managing the duration or taking advantage of pricing anomalies.

Annual returns since September 2012

Futuregrowth Conservative Interest Rate Allocation Composite

Performance period from August 2014 to July 2017

FUTUREGROWTH

/ ASSET MANAGEMENT

The Futuregrowth Conservative Interest Rate Allocation Composite invests in nominal bonds and inflation linked bonds primarily. The benchmark is 80% JSE ASSA All Bond Index (Total Return Index) without deduction (ALBI) plus 20% of the Barclays/ABSA Inflation Linked Bond Index without deduction (BILBI).

 Performance year 2017 only contains data to 31-07-2017.
 Cumulative returns calculated from 01-11-2014.
 Significant cash flow % changed from 20% as of 01-01-2016.

Derivative exposure

Market derivatives are allowed, but are used infrequently and in small size to manage interest rate risk of the fund relative to the benchmark, and to enable the acquisition of longer-term or fixed rate instruments in the fund. Market derivatives are rarely used to add value due to mispricings. The manager does not employ "naked" written options strategies to increase yield.

Annual returns since August 2014

Futuregrowth Development Equity Composite

Performance period from September 2006 to December 2020

FUTUREGROWTH

/ ASSET MANAGEMENT

The Futuregrowth Development Equity Composite offers access to the infrastructure and development asset class outside the traditional private equity model targeting long term stable returns. The benchmark is the South African Consumer Price Index lagged by one month plus 10% (CPI+10%).
